

Safeguarding and Welfare Requirement: Health

The provider must promote the good health of children attending the setting. They must have a procedure, discussed with parents and/or carers, for responding to children who are ill or infectious, take necessary steps to prevent the spread of infection, and take appropriate action if children are ill.

4.4 Managing children who are sick, infectious, or with allergies

(Including reporting notifiable diseases)

Policy statement

We provide care for healthy children through preventing cross infection of viruses and bacterial infections and promote health through identifying allergies and preventing contact with the allergenic substance.

Procedures for children who are sick or infectious

- If children appear unwell during the day – have a temperature, sickness, diarrhoea or pains, particularly in the head or stomach – the manager calls the parents and asks them to collect the child, or send a known carer to collect the child on their behalf.
- If a child has a temperature, they are kept cool, by removing top clothing and sponging their heads with cool water, but kept away from draughts.
- The child's temperature is taken using a forehead thermometer strip, kept in the first aid box.
- In extreme cases of emergency, the child should be taken to the nearest hospital and the parent informed.
- Parents are asked to take their child to the doctor before returning them to the setting; the setting can refuse admittance to children who have a temperature, sickness and diarrhoea or a contagious infection or disease.
- Where children have been prescribed antibiotics, parents are asked to keep them at home for 48 hours before returning to the setting.
- After diarrhoea, it is recommended to keep children home for 48 hours or until a formed stool is passed.
- The setting has a list of excludable diseases and current exclusion times. The full list is obtainable from
- <https://www.england.nhs.uk/south/wp-content/uploads/sites/6/2017/09/spotty-book-1.pdf> and includes common childhood illnesses such as measles.

Reporting of 'notifiable diseases'

- If a child or adult is diagnosed as suffering from a notifiable disease under the Health Protection (Notification) Regulations 2010, the GP will report this to Public Health England (PHE).
- When the setting becomes aware, or is formally informed of four or more cases of the notifiable disease, the manager informs Ofsted and acts on any advice given by PHE.

HIV/AIDS/Hepatitis procedure

- *HIV virus, like other viruses such as Hepatitis A, B and C, are spread through body fluids. Hygiene precautions for dealing with body fluids are the same for all children and adults.*

- *Single-use vinyl gloves and aprons are worn when changing children's nappies, pants and clothing that are soiled with blood, urine, faeces or vomit.*
- *Protective rubber gloves are used for cleaning/sluicing clothing after changing.*
- *Soiled clothing is rinsed and either bagged for parents to collect or laundered in the setting.*
- *Spills of blood, urine, faeces or vomit are cleared using disinfectant solution and mops; any cloths used are disposed of.*
- *Tables and other furniture, furnishings or toys affected by blood, urine, faeces or vomit are cleaned using a disinfectant.*

Nits and head lice

- *Nits and head lice are not an excludable condition, although in exceptional cases a parent may be asked to keep the child away until the infestation has cleared.*
- *On identifying cases of head lice, parents are informed and asked to treat their child and all the family if they are found to have head lice.*

Procedures for children with allergies

- *When parents start their children at the setting they are asked if their child suffers from any known allergies. This is recorded on the Registration Form.*
- *If a child has an allergy, a risk assessment form is completed to detail the following:*
 - *The allergen (i.e. the substance, material or living creature the child is allergic to such as nuts, eggs, bee stings, cats etc).*
 - *The nature of the allergic reactions e.g. anaphylactic shock reaction, including rash, reddening of skin, swelling, breathing problems etc.*
 - *What to do in case of allergic reactions, any medication used and how it is to be used (e.g. EpiPen).*
 - *Control measures - such as how the child can be prevented from contact with the allergen.*
 - *Review.*
- *This form is kept in the child's personal file and a copy is displayed where staff can see it.*
- *Parents train staff in how to administer special medication in the event of an allergic reaction.*
- *Generally, no nuts are used within the setting.*
- *Parents are made aware when necessary so that no nut or nut products are accidentally brought in, for example to a party.*

Insurance requirements for children with allergies and disabilities

- *The insurance will automatically include children with any disability or allergy, but certain procedures must be strictly adhered to as set out below. For children suffering life threatening conditions, or requiring invasive treatments; written confirmation from your insurance provider must be obtained to extend the insurance.*

At all times the administration of medication must be compliant with the Safeguarding and Welfare Requirements of the Early Years Foundation Stage and follow procedures based on advice given in *Managing Medicines in Schools and Early Years Settings* (DfES 2005).

Oral medication

Asthma inhalers are now regarded as 'oral medication' by insurers and so documents do not need to be forwarded to your insurance provider.

- *Oral medications must be prescribed by a GP or have manufacturer's instructions clearly written on them.*
- *The setting must be provided with clear written instructions on how to administer such medication.*
- *All risk assessment procedures need to be adhered to for the correct storage and administration of the medication.*
- *The setting must have the parents or guardians prior written consent. This consent must be kept on file. It is not necessary to forward copy documents to your insurance provider.*

Life saving medication and invasive treatments

Adrenaline injections (Epipens) for anaphylactic shock reactions (caused by allergies to nuts, eggs etc) or invasive treatments such as rectal administration of Diazepam (for epilepsy).

- *The provider must have:*
 - *a letter from the child's GP/consultant stating the child's condition and what medication if any is to be administered;*
 - *written consent from the parent or guardian allowing staff to administer medication; and*
 - *proof of training in the administration of such medication by the child's GP, a district nurse, children's nurse specialist or a community paediatric nurse.*
- *Copies of all three documents relating to these children must first be sent to the Pre-school Learning Alliance Insurance Department for appraisal. Written confirmation that the insurance has been extended will be issued by return.*

Key person for special needs children - children requiring assistance with tubes to help them with everyday living e.g. breathing apparatus, to take nourishment, colostomy bags etc.

- *Prior written consent must be obtained from the child's parent or guardian to give treatment and/or medication prescribed by the child's GP.*
- *The key person must have the relevant medical training/experience, which may include those who have received appropriate instructions from parents or guardians, or who have qualifications.*
- *Copies of all letters relating to these children must first be sent to the Pre-school Learning Alliance Insurance Department for appraisal. Written confirmation that the insurance has been extended will be issued by return.*

If you are unsure about any aspect, contact the Pre-school Learning Alliance Insurance Department on 020 7697 2585 or email membership@pre-school.org.uk.

In non-residential settings, what should be done if a child, young person or other learner becomes unwell with symptoms of coronavirus (COVID-19) and needs to be cared for until they can return home?

If anyone in an education, childcare or non-residential children social care setting becomes unwell with a new, continuous cough or a high temperature, or has a loss of, or change in, their normal sense of taste or smell, they must be sent home and advised to follow the [Stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection](#).

If a child is awaiting collection, they should be moved, if possible, to a room where they can be isolated behind a closed door, with appropriate adult supervision if required depending on the age of the child. Ideally, a window should be opened for ventilation. If it is not possible to isolate them, move them to an area which is at least 2 metres away from other people.

If they need to go to the bathroom while waiting to be collected, they should use a separate bathroom if possible. The bathroom should be cleaned and disinfected using standard cleaning products before being used by anyone else.

PPE should be worn by staff caring for the child while they await collection if direct personal care is needed and a distance of 2 metres cannot be maintained (such as for a very young child or a child with complex needs).

In an emergency, call 999 if they are seriously ill or injured or their life is at risk. Do not visit the GP, pharmacy, urgent care centre or a hospital.

Any member of staff who has helped someone with symptoms, and any children or young people who have been in close contact with them, do not need to go home to self-isolate unless they develop symptoms themselves or they are later advised to do so by NHS Test and Trace or the Local Health Protection Team.

Everyone should wash their hands thoroughly for 20 seconds after any contact with someone who is unwell. Cleaning the affected area with normal household disinfectant after someone with symptoms has left will reduce the risk of passing the infection on to other people. Read [guidance about cleaning non-healthcare settings](#).
